

## AUDIO/VIDEO SYSTEMS

BS, Inc. can make your audio and video dreams a reality. The installation of a multi-source, multi-zone system allows BS, Inc. to segment your home or office into "zones" consisting of a desired group of rooms. Each zone operates independently, allowing you to listen to and control whatever source component you desire at any given time.

All zones are controlled via in-wall keypads or touch panels linked to the electronic components, which can be conveniently located out of sight in a basement A/V rack, cabinet or even a storage closet. BS, Inc. can design a custom video or audio solution by incorporating existing equipment you may already own or

by sourcing cutting-edge technology from industry-leading manufacturers.

Listen to your favorite radio station, CD, or satellite station in any room. Work out to a video in the exercise room while your family watches a ball game or movie in surround sound in the family room... all at the same time!

Stop struggling with various remote controls. BS, Inc. can easily customize a one-touch remote to operate all of your A/V components from the palm of your hand. Imagine having convenient, discrete, in-wall speakers and keypads located in each room to provide easy access and control of your audio or video system.
