

LIGHTING CONTROL

Add elegance to your new home or office by installing a custom-designed lighting control system tailored to your individual or corporate lifestyle.

With the touch of a button, you can control interior and exterior lights. BS, Inc. can integrate your lighting needs with other home control systems including home theater, audio/video, and security, to name a few. Our design consultants can create unique mood lighting scenes including romance, entertainment, being at home or nighttime. We can even program your lighting system

for a vacation or away mode that automatically simulates your daily routine by controlling various lights in the home or office while you are away. Mood settings can function automatically, can be controlled from any room, or remotely via phone or internet.

We partner with premier manufacturers such as Lutron and Centralite to provide sophisticated, user-friendly touch panels and keypads available in a variety of colors to coordinate with any décor.
